

# Rodent

Monitoring System

*Think outside the trap.*

**Get inside their heads.**

# Welcome to the Bayer Rodent Monitoring System.

## Game-changing strategy in rodent control!

A revolution in rodent control is taking place, made possible by Bayer. The Bayer Rodent Monitoring System is new technology that provides 24/7 capture alerts and system status. It helps improve protection, audit-readiness and establish a more effective defense for any facility at risk of infestation. You'll know if you have a problem, in real time... not next week. This enables rapid, efficient response, freeing you to focus on more important things. **That's the Science of Smarter Business.**

**Time to work smarter not harder.** When inspecting rodent traps becomes an automated process, you gain the freedom to focus on preventing infestation instead of hoping your rodent program is up to the task. It's time for a wireless, tireless network of sensory devices that digitally displays activity and pinpoints trap status on your device. The goal: to help you fuel profitable growth, stay ahead of industry regulations and keep business booming.

### Features

- // 24/7 monitoring
- // Real time capture alerts
- // Regular system status reports
- // Up-to-the minute rodent program verification
- // Automated trend lines
- // Graphic floor plan

### Enables

- // Rapid response
- // Faster root-cause analysis
- // Labor efficiency opportunities
- // Infestation avoidance
- // Less business disruption
- // Transparency across facilities
- // Improved audit readiness

Control that sets you free.

# The science of *smarter business.*

Bayer is an innovation company with a more than 150-year history and core competencies in health care and agriculture. Rodent monitoring exemplifies our core strength in turning scientific findings into new technologies and smarter ways of doing business. Bayer is in the business of improving yours.
